Teresa Rodgers of Lynnwood knew her home was wasting heat, so she took advantage of PUD incentives to have insulation blown into the walls.

For customers with electrically heated homes, the PUD’s weatherization program provides the opportunity to increase their home’s insulation levels to improve energy efficiency and overall comfort. Customers including Teresa have saved substantially on their electric bills.

“I would say that our utility costs have dropped by at least a third. From start to finish, the PUD’s rebate program was extremely easy.”

Customers feel good knowing they’re doing something to cut personal costs and helping the environment by using less energy.

“Blown-in insulation is mostly recycled material, so you’re really doing a sustainable thing – plus, you’re not wasting electricity!”

Do your home’s insulation levels need some attention?

Do something good for your home, your pocketbook and the environment with financial assistance from your PUD!

“\textit{I cannot believe how much warmer the house is. And the noise reduction from the outside is amazing – I don’t even hear cars going by on the street anymore.}”

Funding for energy-saving home improvements!

If you have electric heat, the PUD has cash incentives for the installation of insulation, efficient windows or sliding glass doors, or heat pumps.
