

# 2022 Electric System Reliability Performance Report

---

**May 24, 2023**

**Prepared by**  
**Distribution and Engineering Services Division**  
**SNOHOMISH COUNTY PUBLIC UTILITY DISTRICT NO. 1**  
**Everett, Washington**

# Executive Summary

---

This report describes the Snohomish County PUD's (District) electric system reliability from January 1, 2022, through December 31, 2022.

In February of 2017, the District retired the legacy Outage Reporting System (ORS) as the system of record when the new Outage Management System (OMS) was put into service. In conjunction with the adoption of OMS as the system of record, several significant changes occurred.

The number of outages recorded in 2017 and beyond increased as compared to previous years because outage records are automatically generated in OMS, rather than the manual process required by ORS. IEEE recognizes this phenomenon as typical and provides a calculation method for an ‘uplift factor’, described in IEEE Standard 1782, as a means of allowing a more accurate comparison of records prior to an OMS implementation, to post-OMS data. This ‘uplift factor’ has been applied to the data prior to OMS data. This will be the last year where the ‘uplift factor’ is used as in 2023 the previous five year data will be post 2017. Appendix C provides additional data on historical performance without the uplift factor applied.

Before OMS, manually tracking outages in ORS was suspended during declared major events, and high-level estimates of outages were used. Because of the ability to record all outages in OMS, the District has adopted the IEEE defined term, Major Event Day (MED). This allows outages occurring during non-routine conditions to be differentiated from daily operations. MEDs are defined in IEEE Guideline 1366 “Guide for Electric Power Distribution Reliability Indices.”

In addition to tracking outages during non-routine conditions, the District now tracks planned outages, although neither planned outages nor those occurring on MEDs will be included in the District’s SAIDI, SAIFI and CAIDI system indices, and are listed separately. This will allow these reliability indices to reflect reliability experienced under routine conditions to better reveal trends in daily operation, which could be skewed by major events or construction.

District customers lost power for an average of 137.7 minutes (SAIDI) in 2022 during routine operation. This is higher than the adjusted five-year average of 115.0 minutes. The average length of time required to restore power after an outage was 120.3 minutes (CAIDI) in 2022 during routine operation. This is higher than the adjusted five-year average of 102.2 minutes. District customers lost power an average of 1.14 times (SAIFI) in 2022 during routine operation. This is higher than the adjusted five-year average of 1.13 interruptions.

There were eight MEDs for the year, which occurred on February 21, November 04, November 05, November 06, November 07, November 08, November 29, and November 30.

# 1 Background

## 1.1 Introduction

Understanding the causes of outages and developing methods or programs to reduce their rate of occurrence are two of the most important goals in the operation of any electric utility. This report identifies the causes of the outages in 2022 and their impacts on system reliability.

The District receives power from the Bonneville Power Administration (BPA) at three delivery points, the BPA Murray, SnoKing, and Snohomish substations. Transmission lines from those substations deliver power at 115 kV to 92 substations and switching stations in the District's service area. A typical distribution substation has four 12.47 kV circuits and serves an average of 4,000 customers. The District's service territory includes long circuits in the eastern and northern areas of the county, with high tree exposure through rural areas. These circuits experience relatively more outages. The urban and suburban areas in Everett and the south county area typically have shorter circuits and fewer outages.

## 1.2 Statistical indicators used

The District measures electric system reliability using indices defined by the Institute of Electrical and Electronics Engineers (IEEE). The definitions come from the current revision of IEEE Standard 1366- IEEE Guide for Electric Power Distribution Reliability Indices. The standard defines these indices as "sustained interruption indices," meaning a loss of service to one or more customers for more than five minutes. At present, the District defines an outage as a loss of service for one or more minutes.

### **SAIDI (System Average Interruption Duration Index)**

This index measures the total duration of interruption for the average customer during a predefined period of time. It is commonly measured in customer minutes of interruption. Mathematically, this is calculated using the following equation:

$$\text{SAIDI} = \frac{\sum \text{Customer Interruption Durations}}{\text{Total Number of Customers Served}}$$

SAIDI can be calculated for any defined set of customers, such as all customers served from a specific circuit, all customers served from a specific substation, or for all District customers.

## **CAIDI (Customer Average Interruption Duration Index)**

This index represents the average time required to restore service to customers after an interruption. Mathematically, this is calculated using the following equation:

$$\text{CAIDI} = \frac{\sum \text{Customer Interruption Durations}}{\text{Total Number of Customers Interrupted}}$$

CAIDI can also be calculated for any defined set of customers.

## **SAIFI (System Average Interruption Frequency Index)**

This index indicates how often the average customer experiences a sustained interruption over a predefined period of time. Mathematically, this is calculated using the following equation:

$$\text{SAIFI} = \frac{\sum \text{Total Number of Customers Interrupted}}{\text{Total Number of Customers Served}}$$

Similar to SAIDI and CAIDI, SAIFI can be calculated for any defined set of customers.

## **MED (Major Event Day)**

A Major Event Day is used to define a 24-hour period during which SAIDI exceeds a threshold, separating these statistics from those for typical day-to-day operations. This will prevent exceptional days from skewing statistics, allowing reliability analysis to be based on typical days. At the District, MEDs typically occur on snow or wind related days, causing significant tree related outages. The SAIDI threshold to distinguish a day as a MED is calculated using the equation:

$$\text{MED} = e^{(\alpha+2.5\beta)}$$

Where  $\alpha$  is the average of the logarithms of the daily non-zero SAIDI and  $\beta$  is the log-standard deviation of the daily SAIDI.

In 2022 the SAIDI threshold to distinguish a day as MED was found to be 13.23.

## **1.3 Record-keeping**

Until February 2017, the District used a computerized Outage Reporting System (ORS) to manually record information on outages occurring during routine operations. The District's practice was not to record outages that occurred during major events. This was done to alleviate the need for time spent recording outages, so that efforts could be focused on restoration.

Starting in February 2017, the District switched to using an Outage Management System (OMS). OMS automatically creates outage records based on customer calls, prediction rules, and switching operations regardless of a major event, on all days of the year. The purpose of this change is to be more consistent and comprehensive in outage information recording. The effect of implementing this new system has been an increase in recorded SAIDI and SAIFI, as all customer outages are now accounted for automatically.

## **1.4 Change in record-keeping during non-routine operations**

The District no longer excludes outages during major events from reliability calculations. Moving forward the MED threshold will be used to determine which outages are excluded from routine-operation statistics. MEDs will be included in their own category for record keeping.

## 2 System Reliability Statistics

### 2.1 Data for 2022

The tables below show the statistical data for outages in 2022, as well as average data for the five previous years. Refer to Section 1 for definitions of the terms SAIDI, CAIDI, and SAIFI.

The 2022 system SAIDI, CAIDI, and SAIFI values were higher than the five-year averages. There were eight MEDs in 2022. Outages that occurred during a MED, prearranged/planned outages, and outages caused by another utility were excluded from these numbers but are shown in their own row for reference.

**Table 2-1: General Descriptive Data**

<b>Year</b>	2022
<b>System Customers</b>	378,339
<b>Area Served</b>	2,200 square miles

**Table 2-2: Outage Data for 2022**

(Sustained Outage > 1 Minute)

	<b>SAIDI</b>	<b>CAIDI</b>	<b>SAIFI</b>	<b>Customer Outages</b>
<b>Distribution</b>	133.5	130.4	1.02	387,436
<b>Transmission</b>	4.2	35.0	0.12	45,526
<b>Overall</b>	137.7	120.3	1.14	432,962
<b>Planned, MED, or External</b>	866.4	735.6	1.18	445,621
<b>Total</b>	1004.1	432.4	2.32	878,583

**Table 2-3: Five-Year Average Annual Outage Data for the Period 2017-2021 (Non-Adjusted)**

(Sustained Outage > 1 Minute)

	SAIDI	CAIDI	SAIFI	Customer Outages
<b>Distribution</b>	104.0	105.5	0.99	357,839
<b>Transmission</b>	9.4	74.1	0.13	45,897

<b>Overall</b>	114.9	102.2	1.12	408,040
<b>Planned, MED, or External</b>	180.1	340.7	0.53	191,834
<b>Total</b>	295	178.4	1.65	599,873

## 2.2 Effect of Major Event Days on the District

MEDs are days in which the daily system SAIDI exceeds a calculated threshold. These are independent of declared major events, which had been used in the past to separate extreme outage days. MEDs are identified to allow study of the system's daily operation, without being influenced by a few large events.

Beginning in 2017, the District implemented OMS, which captures all outage information, including Major Event Days. In 2022 the SAIDI threshold to distinguish a day as MED was found to be 13.23.

**Table 2-5: Five-Year 2022 Major Event Days**

Date	SAIDI	SAIFI	CAIDI
2022-02-21	17.6	0.05	327.6
2022-11-04	529	0.62	857.9
2022-11-05	107.7	0.09	1220.3
2022-11-06	51.1	0.04	1252.8
2022-11-07	16.2	0.02	749.4
2022-11-08	22	0.01	1991.7
2022-11-29	98.5	0.28	351.1
2022-11-30	18	0.04	493.4

# 3 The Transmission System

## 3.1 Introduction

A transmission outage is the operation of a 230 kV or 115 kV protective device that opens a circuit switcher or power circuit breaker due to a faulted transmission circuit element.

## 3.2 Outages

Of the twenty-eight (28) transmission system operations in 2022:

- Nine (9) resulted in sustained outages to District customers, which caused about thirty-two (32) million customer minutes of interruption (CMI). There were four (4) fewer line operations and about four (4) million less CMI than in 2021.
- The Jackson North Loop outage on September 03, 2022, with a CMI of about twenty five (25) thousand, was the only line trip with customer outages which occurred on a non-Major Event Day (MED). In 2021, there were five (5) more CMI outages on non-MED and about a million and half more CMIs than in 2022.
- November 04, 2022, a major event day, accounted for about 65% of the outages and 85% of all transmission CMIs in 2022.
- Automatic switching schemes operated in seventeen (17) of the transmission line operations, ten (10) of which were temporary and seven (7) were permanent faults. Of the seven (7) permanent faults where the line was auto-sectionalized, the total transmission CMI was reduced in five (5) cases. The permanent fault on the Delta-Stimson Crossing (D-SC) line trip #2 and Beverly Park-Paine Field Line on 11/04/22 are the two instances where the auto-sectionalizing scheme was not in service. For Delta-Stimson Crossing (D-SC) line trip #2, at the time of the event the auto-sectionalizing scheme at Quil Ceda substation had already transferred during the Delta-Stimson Crossing (D-SC) line trip #1 and for Beverly Park-Paine Field Line, the auto-sectionalizing scheme at Harbour Pointe was out of service at the time of the event due to the ongoing Bank 1 transformer and switchgear replacement project.
- Half of the line trips (14) were caused by trees and/or tree branches faulting the transmission line element. The cause of (13) outages was unknown, and one (1) event was caused by an airplane.

Table 3-1 provides the cause and Transmission CMI for each transmission line or substation automatic outage during 2022.

**Table 3-1: Transmission Outages**

Outage Number	Date	Line or Device	Substation(s)	Cause	CMI
1	01/03/2022	BPA Snohomish-Jackson (South) Line Trip	SNPD Snohomish, West Monroe, Woods Creek, Sultan, Wallace River, Goldbar	Tree	Momentary
2	01/06/2022	Swamp Creek-Brightwater Line Trip	Turner's Corner, York, Floral Hills	Tree	Momentary
3	03/07/2022	Delta-Stimson Crossing (D-M) Line Trip	North Marysville, Kellogg Marsh, Central Marysville	Unknown	Momentary
4	03/12/2022	Stimson Crossing-Camano Line Trip	Twin City, North Stanwood, North Camano, Sunset, South Camano	Unknown	Momentary
5	06/03/2022	Jackson South Loop Trip	SNPD Snohomish, West Monroe, Woods Creek, Sultan, Wallace River, Goldbar	Unknown	Momentary
6	07/19/2022	Brightwater-Snoking Line Trip	Park Ridge	Plane	Momentary
7	09/03/2022	Jackson North Loop Trip	<u>Momentary:</u> Lake Chaplain <u>Sustained:</u> Three Lakes	Tree	25,860
8	09/26/2022	Snoking-Swamp Creek Line (SK-SC) Trip	No tapped loads	Tree	NA
9	11/04/2022	Delta-Stimson Crossing (D-SC) Line Trip #1	Tulalip, Village, Quil Ceda	Unknown	Momentary
10	11/04/2022	Delta-Stimson Crossing (D-SC) Line Trip #2	<u>Sustained:</u> Tulalip, Village, Quil Ceda	Tree	3,090,713
11	11/04/2022	East Arlington-Oso Line Trip	<u>Sustained:</u> Oso	Tree	604,332
12	11/04/2022	Stimson Crossing-Camano Line Trip	<u>Momentary:</u> Twin City, North Stanwood <u>Sustained:</u> North Camano, Sunset, South Camano	Tree	10,568,235
13	11/04/2022	Lake Goodwin-North Stanwood Line Trip #1	No tapped loads	Unknown	N/A
14	11/04/2022	Lake Goodwin-North Stanwood Line Trip #2	No tapped loads	Tree	N/A
15	11/04/2022	Beverly Park-Paine Field Line Trip	<u>Momentary:</u> Casino, Picnic Point <u>Sustained:</u> Harbour Pointe, Mukilteo	Tree	11,012,195
16	11/04/2022	East Arlington-Stimson Crossing Line Trip	<u>Momentary:</u> Portage, Lake Goodwin <u>Sustained:</u> Eagle Creek Bank 2	Unknown	491,152
17	11/04/2022	BPA Murray-East Arlington Line Trip	No tapped loads	Unknown	NA
18	11/04/2022	Swamp Creek-Beverly Park (BP-SC) Line Trip	Polaris, Martha Lake, Mariner, Silver Lake	Unknown	Momentary
19	11/04/2022	BPA Murray-Snohomish (FDR 5) Line Trip #1	Granite Falls, Hartford, East Marysville, Frontier, Lake Stevens, Bunk Foss	Unknown	Momentary

Outage Number	Date	Line or Device	Substation(s)	Cause	CMI
20	11/04/2022	BPA Murray-Snohomish (FDR 5) Line Trip #2	<u>Momentary:</u> Granite Falls, East Marysville, Frontier, Lake Stevens, Bunk Foss <u>Sustained:</u> Hartford	Tree	2,055,280
21	11/04/2022	Halls Lake-Snoking1 (SK-HL#1) Line Trip	Brier, Thrashers Corner	Unknown	Momentary
22	11/17/2022	Jackson North Loop Trip	Three Lakes, Lake Chaplain	Unknown	Momentary
23	11/29/2022	Halls Lake-Paine Field Line Trip	<u>Momentary:</u> Lake Serene, Gibson <u>Sustained:</u> Keelers, Meadowdale, Lynnwood, Maplewood, Perrinville	Tree	2,735,253
24	11/29/2022	Jackson North Loop Trip	Three Lakes, Lake Chaplain	Tree	Momentary
25	11/29/2022	Halls Lake-Ballinger Line Trip	Ballinger, Richmond Park, Westgate	Unknown	Momentary
26	11/29/2022	Halls Lake-Five Corners Line Trip #1	Five Corners, Maplewood, Perrinville, Lynnwood	Unknown	Momentary
27	11/29/2022	Halls Lake-Five Corners Line Trip #2	<u>Momentary:</u> Lynnwood <u>Sustained:</u> Five Corners, Maplewood, Perrinville	Tree	1,124,835
28	11/30/2022	Halls Lake-BPA Snoking2 (SK-HL#2) Line Trip	Mountlake, Canyon Park, Fitzgerald	Tree	Momentary

## Transmission Outage Summaries:

1. **01/03/2022 BPA Snohomish-Jackson (South) Line Trip:** The line experienced a temporary single line-to-ground (A-G) fault due to a falling tree. All breakers tripped, reclosed successfully and held. The auto-sectionalizing scheme at Sultan substation operated correctly. SNPD Snohomish, West Monroe, Woods Creek, Sultan, Wallace River, and Goldbar substations all experienced momentary outages.
2. **01/06/2022 Swamp Creek-Brightwater Line Trip:** The line experienced a temporary single line-to-ground (C-G) fault due to a falling tree. All breakers tripped, reclosed successfully and held. The auto-sectionalizing scheme at Floral Hills substation operated correctly and transferred to Swamp Creek-BPA Snoking line. Turner's Corner, Floral Hills, and York substations all experienced momentary outages.
3. **03/07/2022 Delta-Stimson Crossing (D-M) Line Trip:** The line experienced a temporary single line-to-ground (A-G) fault. The root cause of this fault is unknown. All breakers tripped, reclosed successfully and held. North Marysville, Kellogg Marsh, and Central Marysville experienced momentary outages.
4. **03/12/2022 Stimson Crossing-Camano Line Trip:** The line experienced a temporary line-to-line (A-C) fault. The root cause of this fault is unknown. All breakers tripped, reclosed successfully and held. Twin City, North Stanwood, Camano, Sunset, and South Camano all experienced momentary outages.
5. **06/03/2022 Jackson South Loop Trip:** The line experienced a temporary double line-to-ground (BC-G) fault. The root cause of this fault is unknown. All breakers tripped, reclosed successfully and held. The auto-sectionalizing scheme at Sultan substation operated correctly. SNPD Snohomish, West Monroe, Woods Creek, Sultan, Wallace River, and Goldbar substations all experienced momentary outages.
6. **07/19/2022 Brightwater-Snoking Line Trip:** The line experienced a temporary line-to-line (A-B) fault, caused when an experimental plane crash-landed, hitting power lines on its way down. All breakers tripped, reclosed successfully, and held. Park Ridge substation experienced a momentary outage.
7. **09/03/2022 Jackson North Loop Trip:** The line experienced a permanent line-to-line (A-B) tree fault. The auto-sectionalizing schemes at Three Lakes and Lake Chaplain substations operated correctly. Lake Chaplain substation experienced a momentary outage and Three Lakes substation experienced a sustained outage of 6 minutes.
8. **09/26/2022 Snoking-Swamp Creek Line (SK-SC) Trip:** The line experienced a permanent line-to-line (A-C) tree fault. PUD Major Yards crew was doing brush cutting and cut the guy wire which caused the pole and lines to lean into a tree. There are no tapped loads and no auto-sectionalizing schemes on this line. The line was back in-service about 2 hours and 31 minutes later after fault inception.
9. **11/04/2022 Delta-Stimson Crossing (D-SC) Line Trip #1:** The line experienced a temporary line-to-line (A-C) fault during the day's windstorm event. All breakers tripped, reclosed successfully, and held. The auto-sectionalizing scheme at Quil Ceda operated correctly and transferred Quil Ceda onto the parallel D-M line. Quil Ceda, Tulalip, and Village substations all experienced momentary outages.
10. **11/04/2022 Delta-Stimson Crossing (D-SC) Line Trip #2:** The line experienced a permanent line-to-line (A-C) tree fault during the day's windstorm event. The Village auto-sectionalizing scheme was not in service at the time of the event, so service to Village was restored from the Stimson Crossing end of the line after a 32 minutes outage. Quil Ceda, which had previously been auto-transferred onto the adjacent (D-M) Line when the (D-SC) line tripped earlier the same night, didn't experience an interruption but had to be de-energized for 57 minutes to repair a burnt-up conductor. Tulalip experienced a 1,275 minute outage as a result of the trip.
11. **11/04/2022 East Arlington-Oso Line Trip:** The line experienced a permanent three phase (3LG) tree fault during the day's major wind event. The East Arlington terminal tripped to lockout and the line was restored the following day. A sustained outage occurred at Oso substation (1,334 minutes).
12. **11/04/2022 Stimson Crossing-Camano Line Trip:** The line experienced a permanent line-to-line (A-C) tree fault during the day's major windstorm event. The North Stanwood auto-sectionalizing scheme operated correctly and the Stimson Crossing-North Stanwood section of the line was automatically restored. After the line was initially fully restored the following morning, the North Stanwood-South Camano section of the line had to be de-energized again to fix a leaning pole. Twin City and North Stanwood experienced momentary outages and North Camano (732 minutes), Sunset (1,170 minutes) and South Camano (1,170 minutes) experienced extended outages.

13. **11/04/2022 Lake Goodwin-North Stanwood Line Trip #1:** The line experienced a temporary line-to-line (A-B) fault during the day's major windstorm event. The breaker tripped, reclosed successfully and held. No outages occurred because the line was unloaded at the time of the event.
14. **11/04/2022 Lake Goodwin-North Stanwood Line Trip #2:** The line experienced a permanent line-to-line (A-C) tree fault during the day's major windstorm event. The line was restored a week later as more inspection had to be performed to check for suspected conductor damage. No customer service interruptions were incurred, as the Lake Goodwin-North Stanwood Line was unloaded at the time of the event.
15. **11/04/2022 Beverly Park-Paine Field Line Trip:** The line experienced a permanent line-to-line (A-C) tree fault during the day's major windstorm event. The auto-sectionalizing scheme at Picnic Point operated correctly, enabling the automatic restoration of the Beverly Park-Picnic Point section of the line. The auto-sectionalizing scheme at Harbour Pointe was out of service at the time of the event due to the ongoing Bank 1 transformer and switchgear replacement project and SCADA control of the Harbour Pointe line switches was not available. Picnic Point and Casino substations experienced momentary outages and Harbour Pointe Bank 2 (944 minutes) and Mukilteo (1800 minutes for feeders 12-129 and 12-600, 1000 minutes for feeder 12-128 and 1,068 minutes for 12-4523) experienced extended outages.
16. **11/04/2022 East Arlington-Stimson Crossing Line Trip:** The line experienced a temporary line-to-line (A-B) fault that evolved into a three phase (3LG) fault during that day's major windstorm event. The Portage auto-sectionalizing scheme operated correctly and Stimson breakers auto-reclosed and the East Arlington lead breaker did as well, but the follower breaker, which was de-energized on its bus side, did not. This led to an extended outage (53 minutes) of the Eagle Creek Bank 2 and the Navy Jim Creek line, due to breakers having tripped earlier during the East Arlington-Oso line trip to lockout. Momentary outages occurred at Lake Goodwin and Portage substations.
17. **11/04/2022 BPA Murray-East Arlington Line Trip:** The line experienced a temporary double line-to-ground (AC-G) fault during the day's major wind storm event. This trip occurred within less than a second after the trip of the Stimson Crossing-East Arlington line, therefore the East Arlington terminal of the BPA Murray-East Arlington Line didn't trip, given that the Stimson Crossing-East Arlington line is the only other source to that substation. The East Arlington breaker was also open at the time of the event, having tripped to lockout following a permanent fault on the East Arlington-Oso line earlier the same night. The BPA Murray-East Arlington Line does not feed any tapped load, however, because that line was the only source to East Arlington at the time of the event, Eagle Creek Bank 1 experienced a momentary outage (Eagle Creek Bank 2 and the Navy Jim Creek Line experienced a more sustained outage as a result of the Stimson Crossing-East Arlington line trip which occurred almost simultaneously).
18. **11/04/2022 Swamp Creek-Beverly Park (BP-SC) Line Trip:** The line experienced a temporary three phase (ABC) fault during the day's major windstorm event. All breakers tripped, reclosed successfully, and held. The auto-sectionalizing scheme at Mariner substation correctly operated. Momentary outages occurred at Polaris, Martha Lake, Mariner, and Silver Lake Substations.
19. **11/04/2022 BPA Murray-Snohomish (FDR 5) Line Trip #1:** The line experienced a temporary line-to-line (A-C) fault during the day's major windstorm event. All breakers tripped, reclosed successfully, and held. The auto-sectionalizing scheme at East Marysville correctly operated. Momentary outages occurred at Bunk Foss, Lake Stevens, Frontier, East Marysville, Hartford, and Granite Falls Substations.
20. **11/04/2022 BPA Murray-Snohomish (FDR 5) Line Trip #2:** The line experienced a permanent line-to-line (A-C) fault during the day's major windstorm event because of a large tree in the line between Hartford and Granite Falls substations. This sustained fault resulted in a momentary outage at Bunk Foss, Lake Stevens, Frontier, East Marysville, and Granite Falls Substations. The Auto-Sectionalizing schemes isolated the faulted section, which feeds Hartford substation, resulting in an extended outage (458 minutes).
21. **11/04/2022 Halls Lake-Snoking1 (SK-HL#1) Line Trip:** The line experienced a temporary line-to-line (A-B) fault, which evolved into a three phase (ABC) fault during that day's major windstorm event. All breakers tripped, reclosed successfully, and held. The auto-sectionalizing scheme at Thrashers Corner correctly operated. Momentary outages occurred at Thrashers Corner and Brier Substations.

22. **11/17/2022 Jackson North Loop Trip:** The line experienced a temporary line-to-line (A-B) fault. The root cause of the fault is unknown. The fault caused momentary outages at Lake Chaplain and Three Lakes substations.
23. **11/29/2022 Halls Lake-Paine Field Line Trip:** The line experienced a permanent line-to-line (A-B) tree fault during that day's snowstorm event. The Paine Field-Lake Serene section of the line was automatically restored after the Lake Serene auto-sectionalizing scheme operated, and the remaining section of the line was manually restored via SCADA. At the time of the event, the line was being used to feed the Maplewood-Lynnwood section of the Halls Lake-Five Corners Line, which had tripped to lockout about an hour-and-a-half earlier the same night. This permanent fault resulted in extended outages at Keelers and Meadowdale (12 minutes each), while Gibson and Lake Serene substations only experienced momentary outages. Maplewood and Perrinville, which were being fed by the Halls Lake-Paine Field line through Lynwood substation at the time of this event because the Halls Lake-Five Corners Line had previously tripped to lockout, experienced an additional 291 minutes outage and Lynwood an additional 12 minutes as well.
24. **11/29/2022 BPA Snohomish-Jackson Hydro (North Loop) Line Trip:** The line experienced a permanent line-to-line (A-C) fault due to a tree in the line. The auto-sectionalizing schemes at Lake Chaplain and Three Lakes operated correctly. The fault resulted in a momentary outage at Lake Chaplain and Three Lakes Substations.
25. **11/29/2022 Halls Lake-Ballinger Line Trip:** The line experienced a temporary single line-to-ground (B-G) fault. The root cause of the fault is unknown. With successful reclosing, the Ballinger and Westgate auto-sectionalizing schemes did not operate. This temporary fault resulted in a momentary outage at Ballinger, Westgate, and Richmond Park substations.
26. **11/29/2022 Halls Lake-Five Corners Line Trip #1:** The line experienced a temporary line-to-line (A-C) fault. The root cause of the fault is unknown. With successful reclosing, the Maplewood and Lynnwood auto-sectionalizing schemes did not operate for this temporary fault. The temporary fault resulted in a momentary outage at Five Corners, Maplewood, Perrinville, and Lynnwood substations.
27. **11/29/2022 Halls Lake-Five Corners Line Trip #2:** The line experienced a permanent single line-to-ground (B-G) tree fault. The reclosing attempts failed and locked-out. The Maplewood and Lynwood auto-sectionalizing schemes operated correctly. This permanent fault resulted in an extended outage (75 minutes) at Five Corners substation, Maplewood substation, Perrinville substations.
28. **11/30/2022 Halls Lake-BPA Snoking2 (SK-HL#2) Line Trip:** The line experienced a temporary single line-to-ground (C-G) fault caused by a tree. The Mountlake auto-sectionalizing scheme operated correctly. The temporary fault resulted in a momentary outage at Fitzgerald, Canyon Park and Moutlake substations.

# 4 The Distribution System

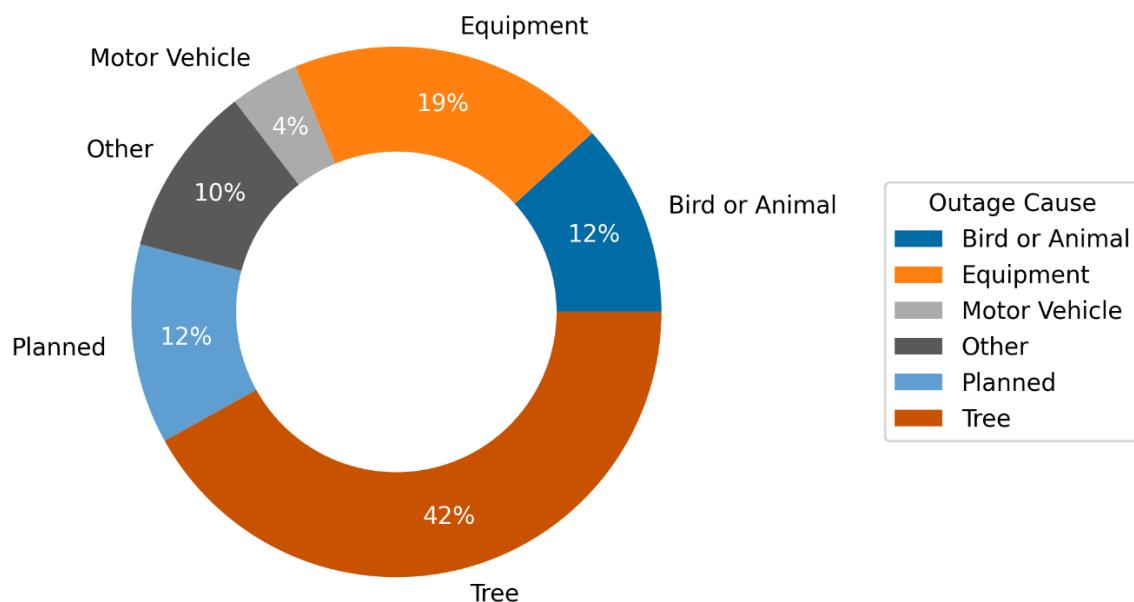

## 4.1 Introduction

This section describes outages on the District 12.47 kV distribution system. These outages are more frequent and involve fewer customers per event than most transmission system outages. While the number of outages are somewhat balanced between trees, animals, and equipment failures, most of the outage minutes are due to outages caused by trees and motor vehicle accidents. Animal and equipment failures often involve distribution transformers and affect a small number of customers. Damage caused by trees and motor vehicles is less discriminating and can affect infrastructure such as feeders and large branch circuits, which have larger customer impacts.

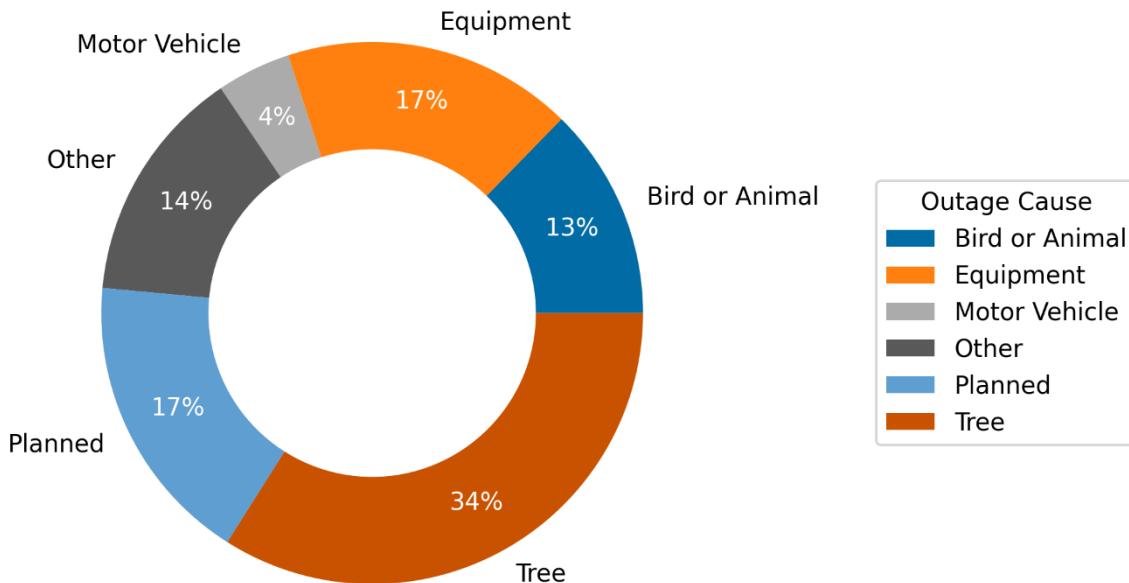

## 4.2 System Performance

### 4.2.1 Outage Causes

Figures 4-1 and 4-2 show the count of distribution outages by cause for 2022 and the average for the five-year period of 2017-2021. In 2022, 2,697 distribution outages were recorded during routine operation, compared to the five-year average of 2,593 annual outages. The percentages shown in Figures 4-1 and 4-2 are percentages of the total number of outages in each period. The District started tracking planned outages in 2017.

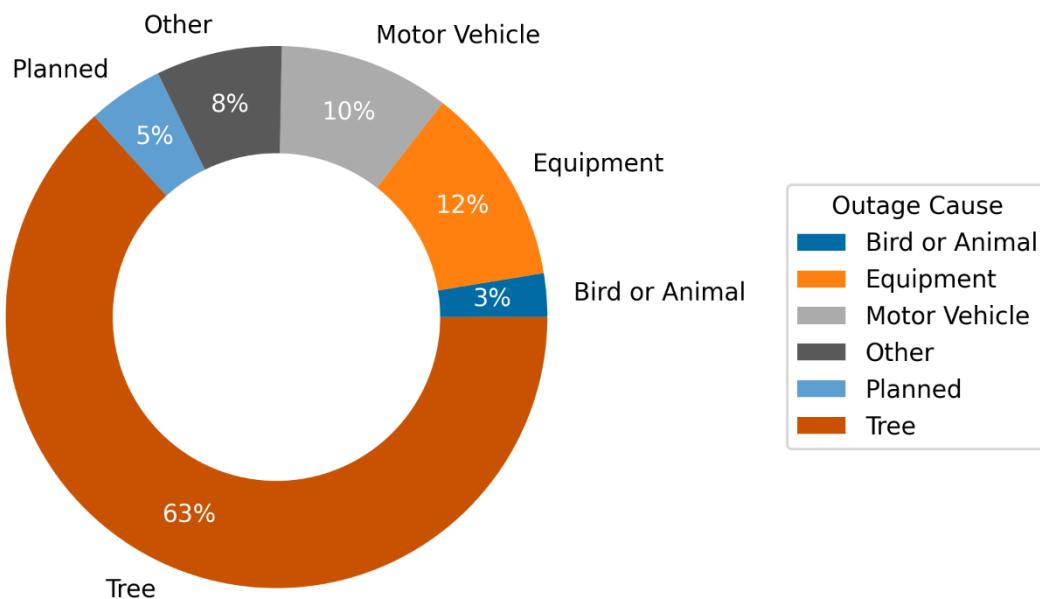

**Figure 4-1: 2022 Distribution Outages by Cause**

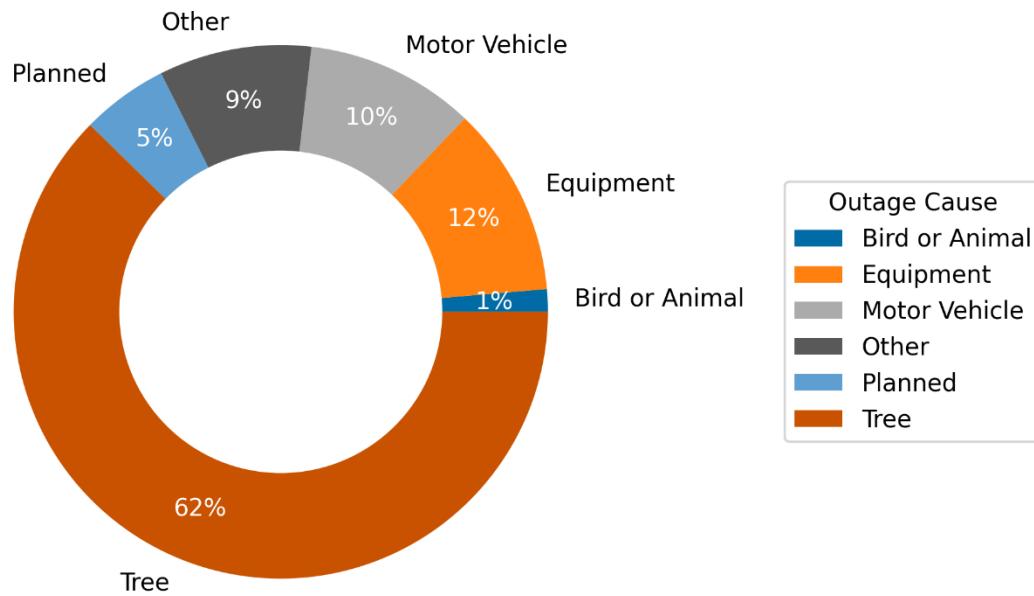

**Figure 4-2: Five-Year Average Distribution Outages by Cause (2017-2021)**

Figures 4-3 and 4-4 show the 2022 and five-year average percent of customer outage minutes by cause. District customers lost power for a combined total of 50,558,653 minutes in 2022 due to distribution outages, compared to the five-year average of 37,935,469 uplifted minutes. Both the number of outages and the customer minutes of outage are important parameters for planning effective outage impact reduction measures.

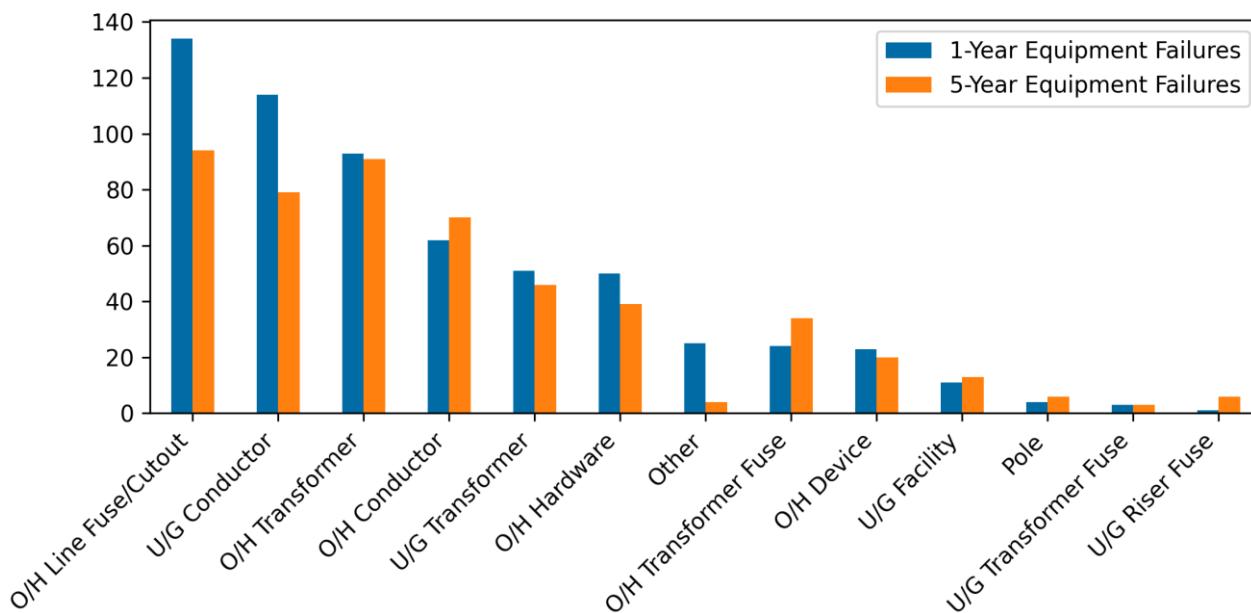

**Figure 4-3: 2022 Distribution Outage Minutes by Cause**

**Figure 4-4: Five-Year Average Distribution Outage Minutes by Cause (2017-2021)**

#### 4.2.2 Explanation of Equipment Failure Category

Equipment failures may include any component of the distribution system, from primary overhead conductors, to fuses, transformers, insulators, and secondary service conductors. Figure 4-5 (blue bars) shows the number of recorded equipment failures by category during 2022. The ten most common types of equipment failure accounted for 603 outages in 2022. For comparison, Figure 4-5 (orange bars) shows the five-year average of the number of equipment failures for each category.

**Figure 4-5: 2022 Equipment Failures**

## 4.3 Urban, Suburban, Rural Classifications

IEEE Standard 1782 defines circuits as urban (greater than 150 customers per mile), suburban (between 150 and 50 customers per mile) and rural (less than 50 customers per mile). Classifying circuits indicates how susceptible those circuits are to having an outage. Shorter circuits are less likely to have an outage, due to less available exposure to faults. Conversely, longer circuits have more conductor, and thus are more likely to be damaged. To compare similar circuits, circuits are identified by performance based on circuit length. This table does not include outages that occurred during declared major events or planned outages.

**Table 4-1: Circuit Classification Data**

Classification (# of circuits)	Average Circuit Length	Average Number of Customers	Customers per Mile	Average SAIDI	Average SAIFI	# of Outages
<b>Urban (45)</b>	6.9 miles	1,341	198.6	57.3	0.52	167
<b>Suburban (184)</b>	13.2 miles	1,195	95.0	64.6	0.68	983
<b>Rural (102)</b>	32.2 miles	833	27.4	315.4	2.17	1598

## 4.4 Reliability Improvement Priority

Before 2017, the System Planning and Protection department used the “20 Worst Circuits” annually to target circuits for reliability improvements. This method had flaws. Typically, the same circuits would show up year after year due to their circuit length, rather than their relative reliability. There were also circuits on the list that had experienced no distribution outages, with all outage minutes caused by transmission outages. While valuable to know, that measure was irrelevant, as no distribution improvements would improve the reliability of the circuit. In 2017, an objective metric to help prioritize feeders for reliability work was developed comparing SAIDI normalized by circuit length and SAIFI. The metric is based on distribution outages only, allowing results to guide engineers to help decide which distribution changes should be prioritized to improve reliability. For this list, the circuit SAIDI and SAIFI were based on the number of customers on their original circuit. The OMS system has a design flaw when counting CMI for outages that involve multiple circuits. This happens when a breaker opens while a circuit is picking up a second circuit. This causes highly inaccurate reliability statistics for circuits with this type of outage. This should reduce the impact of the OMS design flaw on our reliability statistics.

$$rank(d, f) = \frac{d - \mu_d}{\sigma_d} + \frac{f - \mu_f}{\sigma_f}$$

Where ‘d’ is the circuit SAIDI divided by the circuit length, ‘f’ is the circuit SAIFI, ‘μ’ is the mean, and ‘σ’ is the standard deviation

**Table 4-2: Circuit Reliability Improvement Priority for 2022**

Rank	Feeder	Substation	Length	SAIFI	SAIDI	Incident Count	Customers	Score
1	12-2035	Lake Chaplain	4.5	4	524	4	2	9.82

# Appendix A

## District Outage Management System

These tables include outages that occurred on both the transmission system and on the distribution system. They do not include outages that occurred during declared major events and do not have an uplift factor applied to previous years.

**Table A-1: Substation Metrics**

This table shows the substation reliability metrics for 2022 and the previous five year average.

Substation	Period	Customers	Outages	CMI	SAIDI	SAIFI	CAIDI
20th Ave	2022	2,492	10	465,048	186.6	1.74	107.2
