

Summer Energy Conservation

Follow these quick tips to save energy this summer:

Close the blinds to keep out heat and reduce the need for air conditioning if you have it.

Turn off ceiling fans when you leave a room – fans cool people not rooms by creating a wind-chill effect.

Take advantage of daylight instead of turning on the lights.

Seal cracks and openings to prevent warm air from leaking into your home.

Add caulk or weather stripping to windows to help keep heat out.

Employee Spotlight: Water AMI Deployment Team

The Water Advanced Meter Deployment Team played a key role in the PUD’s Connect Up program, an effort to upgrade all electric and water meters across the service territory. Through careful planning and strong execution, the team exchanged nearly 24,000 water meters in less than three years – finishing ahead of schedule and under budget. They continually increased their pace to meet ambitious goals while maintaining a safety mindset and commitment to excellence.

Safety Spotlight: Drones

Flying a drone to check out cool views in your neighborhood? Be sure to stay at least 200 feet away from power lines to keep you and your drone safe. Flying closer can affect your drone’s signals and controls and if your drone touches a power line, it could cause a power outage.

Easy Ways to Save: Use smart power strips

Smart power strips can help control your energy usage by cutting off power to devices that are not in use.

The PUD publishes a Summary Report each year with details on billing, credit policies, rates, and more. Find it online at **snopud.com/quickfacts** or request a copy by calling 425-870-5467.

Turn down costs. Turn up comfort!

PUD customers with electric heat can get \$50-\$75 rebates on qualifying energy-saving thermostats. Stay comfy year round.
